Bass That Rocks The Place

Accuracy is key to any home theater system. With that in mind, Proficient subwoofers are built to fill your media room with powerful low frequency energy for listening to movies and music. Our subs will seamlessly integrate with your home theater speaker system to enhance your listening experience.

If you are looking for something more space-conscious, the S88 may just fit the bill. When placed in a corner, the dual 8" subwoofers are positioned to couple with the walls and maximize bass loading into the room. The result? A small 250 watt sub that handles deep bass notes without breaking a sweat.

Or, you may want to consider the S12. This sub features a 12" woofer and is ideal for a big media room where you also want super-low bass. The woofer and dual-vents are positioned to fire forward to better couple the system to the room. Plus, our high-output 250-watt amp delivers increased sound pressure levels with absolute minimum distortion.

The S10 offers all the elements of the S12, but is a bit more compact. The speaker, amplifier and crossover network in the S10 are optimized to provide accurate, tight bass while maintaining control at low frequencies. The S8 is a compact package yet still provides deep bass output to meet the demands of most mid-sized media rooms.

Proficient subwoofers are built using some of the best components available and will last for years to come. The quality is evident, of course. Exactly what you'd expect from a premium brand like Proficient.
