

PROFICIENT SIGNATURE SERIES

# INTRODUCING OUR LATEST COLLECTION OF OVERACHIEVERS

## The Proficient Signature Series

There are few things in life that appeal to us more than a timeless design. With that, the Proficient Signature Series is our flagship product that exceeds every Proficient design milestone and establishes many new ones that are entirely its own.

With a gorgeous seven layer black lacquer finish, their stylized presence will create an immediate visual connection and their sonic performance will stimulate the rest of your senses too – for many years to come.

Advanced engineering, meticulous craftsmanship and styling that blends with any room decor – it's the trifecta that squarely positions the Proficient Signature Series at the top of its game. And does so by paying attention to what matters most: the basics of great sound.

The Proficient Signature Series really integrates with all of the black gloss flat panel TVs. So it's not just your best design choice for today but for many years down the road too. Add it all up and it's clear that the Proficient Signature Series is not just another home theater speaker – it's a design whose time has arrived.

## Your Pulse Will Be Racing Before You Ever Turn Them On

It takes a lot more than a great looking cabinet to define a Proficient loudspeaker. A fact that is more true than ever with our all-new headliner – the Proficient Signature Series.

Consider the GL6 Dual 6½" LCR Speaker. Its incredibly stiff graphite woofers produce opulent amounts of powerful bass and an open midrange that gives you both crystal clear voice articulation and a strong performance edge. And because life needs highs along with the lows, its silk dome tweeter works seamlessly with the graphite woofers to produce awesome detail and superb imaging in the sound field.

Our flagship GS10 subwoofer has a 250 watt digital power plant and features a 10" long-excursion pulp composite cone woofer for lows that you used to have to buy a ticket to hear. How low? Well, how does deep bass all the way down to 28Hz sound? That's almost a half-octave below the lowest note on a bass guitar and low enough to make short work out of your favorite soundtracks too.

# FEATURES & SPECS

---

## GL6 Dual 6½" LCR Speaker

- 7-Layer Gloss Black Finish
- Wood Framed Grille with Neo-Magnets
- Cabinet Design
- Two 6½" Graphite Woofers
- 1" Silk Dome Tweeter
- Power Handling: 125 Watts
- Frequency Response: 46Hz - 20kHz
- Impedance: 4Ω
- Sensitivity: 89dB 1W/1m
- Dimensions (H x W x D): 8" x 24" x 10½"

## GS10 10" Subwoofer

- 7-Layer Gloss Black Finish & Aluminum Feet
- Wood Framed Grille with Neo-Magnets
- 10" Long Excursion Pulp-Composite Cone Woofer
- Power: 250 Watt RMS Class D Amplifier
- Frequency Response: 28Hz - 200Hz
- Input: Left & Right Line Level, LFE
- Phase Switch: 0 - 180°
- Protection: Overload Limiter Circuit
- Power On/Off: Auto Sensing
- Crossover: 50Hz - 150Hz
- Dimensions (H x W x D): 13½" x 13½" x 14½"
